LANGUAGE: English

ABSTRACT: A technology for encapsulation of swine semen in barium *alginate* and *protamine* *alginate* has recently been proposed for the controlled release of the spermatozoa, thus reducing the number of instrumental inseminations required. Controlled-release capsules containing swine spermatozoa were prepared by adding saturated BaCl2 solution to ejaculate and dropping the resulting suspension into a sodium *alginate* solution, leading to the formation of barium *alginate* capsules. A second type of capsule was obtained by cross-linking the barium *alginate* with *protamine* sulfate. Two types of membrane were thus obtained: barium *alginate* gel and a *protamine* cross-linked *alginate* membrane. Morphological (scanning electron microscopy and transmission electron microscopy), functional (motility, membrane integrity and in vitro fertilization test) and technological (capsule structure and weight) approaches...

RECORD TYPE: Abstract

LANGUAGE: English

Multilayer *alginate*/*protamine* microsized capsules: Encapsulation of alpha-chymotrypsin and controlled release study.

ABSTRACT: Stable polyelectrolyte microcapsules with size 6.5 µm were produced by means of the layer-by-layer adsorption of sodium *alginate* and *protamine* to surface of melamine formaldehyde microparticles. Core decomposition at low pH leads to formation of polyelectrolyte multilayered capsules filled with *alginate* gel. A proteolytic enzyme, alpha-chymotrypsin, was loaded into these microcapsules by embedding in *alginate* gel with high efficacy. The protein in the capsules was found to retain a high physiological activity of about 70% showed with fluorescent product. The...

...8.0 (0.05 M Tris buffer) in the presence of 2.5% w/v of sodium deoxycholate. The release rate of enzyme from multilayer *alginate*/*protamine* microcapsules can be regulated by additional adsorption of polyelectrolytes onto the microcapsules with encapsulated protein. Such protein-loaded capsules can be proposed as a drug...

Set	Items	Description
S1	0	ALGINATE (4N) (POLY LYSINE)
S2	40	ALGINATE (5N) PROTAMINE
S3	17	RD (unique items)
S4	0	S3 AND (ORAL? OR ENTERIC?)
S5	0	S3 AND ANTISENSE
S6	17	S3 AND ALGINATE
